Predicting Pathologic Complete Response from Clinical Variables

Tom Stoughton, MS Candidate[1]

Abstract

...

Keywords: Pathologic Complete Response, Breast Cancer, Logistic Regression,

Introduction

This data set contains publicly available clinical and demographic information about 1,506 breast cancer patients from four different trials[1]

Motivating Problem

...

Methods

Using Multivariate Imputation by Chained Equations (MICE).

logistic regression on clinical variables.

Table 1: Model 1: Pooled Logistic Regression
